

## Monday:

One is a snail ten is a crab

Watch and listen to One is a snail, ten is a crab. Make sure you know how many feet each animal has.

Ask children if they can make a crab plus a snail ( $10 + 1$ ) on tens frames. How many would they have?

How many more do you need to get to 20?

Children need to pick 2 animals to make addition number sentences, the answer will be a teen number. They will always have a crab (10) and they have to pick another animal e.g. dog (4). Children would record  $10 + 4 = 14$ .
