

Geography Curriculum

“Geography is the subject that holds the key to our future.”

~Sir Michael Palin

Purpose of Study:

 Philosophical	<p>Children will be inspired to develop a curiosity and fascination to find out about the world and its people. They will be able to think critically and question a range of current social and cultural issues facing the world today which will illuminate their understanding at a deep and lasting level. Children will connect with, and make informed decisions about, the world from a position of evolving knowledge and understanding.</p>
 Practical	<p>Children will be immersed in a range of hands-on experiences in which they connect, analyse and communicate with a range of data gathered through field work that deepens their understanding of geographical processes. They will use first hand observation and geographical skills, such as mapping, to gain knowledge and practical experience in both physical and human outdoor environments.</p>
 Emotional	<p>Children will be able to understand their place as inhabitants of Earth and the responsibility they will have for a future that is not yet known. Their awe and wonder inspires them to appreciate the world and to care and protect it against multiple threats: climate change; poverty; inequality; conflict and migration.</p>
 Intellectual	<p>Children will build their knowledge of the world, debate the matters that will affect their lives and learn to analyse facts in order to contribute creatively to the world. Their growing knowledge about the world helps children understand the interaction between physical and human processes, and the formation and use of landscapes and environments.</p>
