

# WHAT IS A FRACTION?

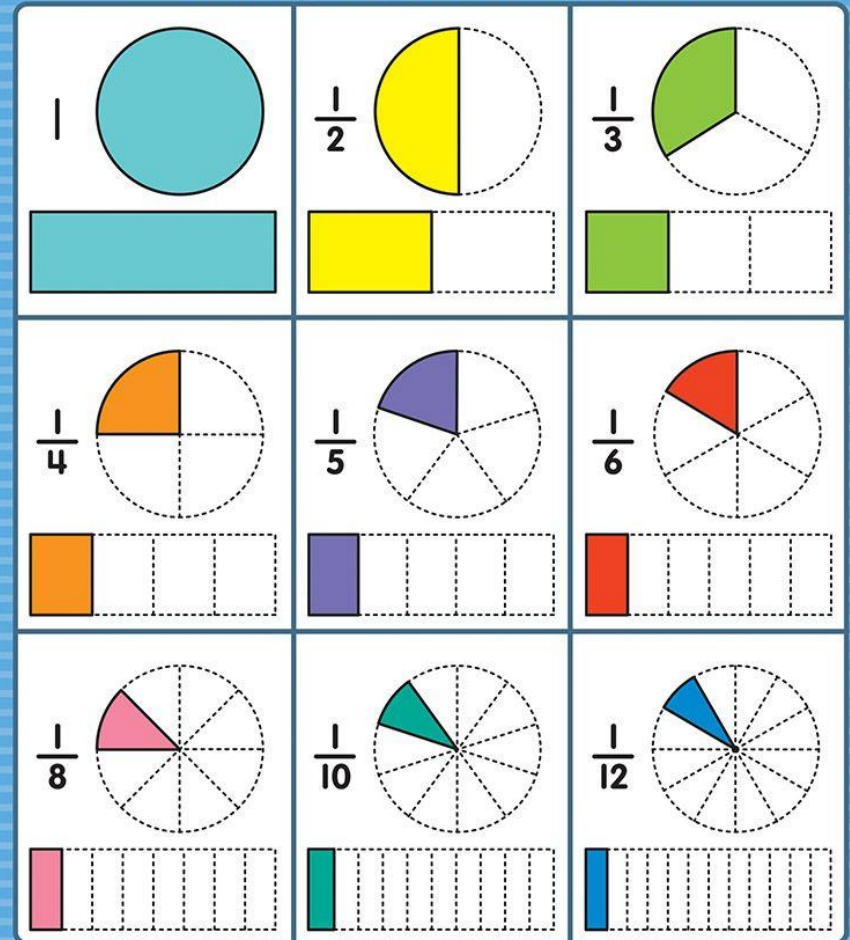

# Fractions

## Parts of a Whole

A fraction is a **part** of something.

All of the **parts** together will make a whole.

All of the parts **HAVE TO BE EQUAL.**

We write a fraction with one number on top of the other with a line between them.

The top number is called the **numerator**.

The bottom number is called the **denominator**.

It is helpful to think of fractions as “... out of ...” pieces. For example, 1 out of 2.

$$\frac{1}{2}$$

Fun fact: this line is called the vinculum!

What fraction is being represented?

There are  equal parts altogether.

out of  equal parts is shaded.

of the shape is shaded.

What fraction are shaded red?

There are  equal parts altogether.

out of  equal parts are shaded red.

of the shapes are shaded red.

Which of these representations shows  $\frac{1}{4}$ ? Why?
